

# Proportional reducing valves

direct operated, ISO 4401 size 06 subplate mounting or M20 screw-in cartridge execution

## RZGE-A, CART RZGE-A

Open loop, poppet type direct operated proportional pressure reducing valves with proportional solenoids certified according to North American standard **CURus**.

They operate in association with electronic drivers, see section 2, which supply the proportional valves with proper current to align the valve regulation to the reference signal.

They are available in following executions:

**RZGE:** subplate mounting, ISO size 06

**CART RZGE:** M20 cartridge execution

The solenoid coils are plastic encapsulated with insulation class H and they are available with different nominal resistances depending to the voltage supply (12 VDC or 24 VDC) and to the electronic driver type, see section 2 and 3.

Mounting surface RZGE: **ISO 4401 size 06**

Cavity CART RZGE: see section 2

Max flow = **12 l/min**

Max pressure = **210 bar**

### 5 GENERAL NOTES

RZGE-A and CART RZGE-A proportional valves are CE marked according to the applicable Directives (e.g. Immunity/Emission EMC Directive and Low Voltage Directive).

Installation, wirings and start-up procedures must be performed according to the general prescriptions shown in table F003 and in the installation notes supplied with relevant components.

with flow rate  $Q = 1$  l/min

**Notes:**

The presence of counter pressure at port T can affect the effective pressure regulation.

**2 Pressure/flow diagrams**

**8 AIR BLEEDING**

At the first valve commissioning the air eventually trapped inside the solenoid must be bled-off through the screw ① located at the rear side of the solenoid housing.  
The presence of air may cause pressure instability and vibrations.
