

# Complementary safety valves with /FC mechanical microswitches

conforming to Machine Directive 2006/42/CE

These valves are provided with **FC** mechanical microswitch ① for the spool position monitor and they are designed to fulfil the safety criteria imposed to machine manufacturers by the European Machine Directive.

In addition to the normal function they supplies an electrical on-off output signal indicating the position of the spool/poppet of the valve.

The safety function performed by the valve is to cut off the hydraulic power line in case of emergency condition, avoiding dangerous movements of the machines actuators. The spool position signal informs the machine controller about the "open" or "intercepted" status of the hydraulic line.

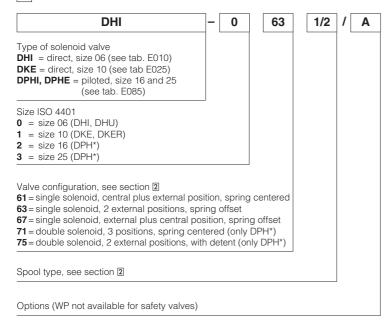

These valves are available in direct and piloted execution and they keep the same hydraulic and electric characteristics of standard products from which they are derived.

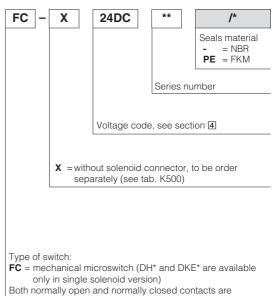

Classic example of application: on presses or on blow moulding machines the safety valves are used to shut off the fluid energy to one or more actuators as a consequence of the opening of a mechanical safety device ("gate") or as a consequence of an "emergency stop" command.

The components shown on this technical table are CE marked and certified by TÜV, in accordance with the technical safety requirements provided in the Machine Directive 2006/42/CE but not included in the safety components of annex IV.

For details about the applicable EN standards, see www.atos.com, catalog on line page, section P, table P004.

#### 6.1 Coils characteristics

Insulation class	H (180°C) for all valves with DC coils and DHI, DPHI with AC coils	
	F (155°C) for DKE, DPHE with AC coils	
	Due to the occuring surface temperatures of the solenoid coils, the European standards EN ISO 13732-1	
	EN ISO 4413 must be taken into account	
Connector protection degree	IP 65	
Relative duty factor	100%	
Supply voltage and frequency	See electric feature 6	
Supply voltage tolerance	± 10%	
Certification (only DHI, DKER, DPHI)	cURus North American standard	

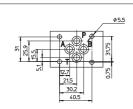

WARNING: the inobservance of following prescriptions invalidates the certification and may represent a risk for personnel injury Safety valves must be installed and commissioned only by qualified personnel Safety valves must not be disassembled

The inductive proximity switch or the position switch can be adjusted only by the manufacturer Valve's components cannot be interchanged

The valves must operate without switching shocks and spool / poppet vibrations
